

## QUALITY CRANES SINCE 1961

Liftmoore builds a complete line of electric and hydraulic cranes with capacities to 10,000 Lbs. and moment ratings to 72,000 Ft.-Lbs. Our cranes have proven themselves in the field for over 50 years. Applications include field service work on mobile equipment, municipal water and sewer repair, railroad maintenance, oil field and pipe line maintenance and propane tank setting.

Contact Liftmoore for your local truck equipment distributor.

We can help with your application. To specify the crane needed for your use it is advisable to follow the guideline below.

## SPECIFYING CRANES

There are three things that must be determined to select the crane you need:

How much weight will be lifted?

Determines crane size. Allow a safety factor for extra weight such as slings, etc. Do not expect more than the rated capacity.

How far out from the center of rotation is the load?

The maximum reach (Feet) times the maximum weight (Lbs.) determines the minimum moment rating for your use.

How often will the lift be made?

This determines whether to use a hydraulic crane or electric crane. The duty cycle for electric cranes should be kept to 5 minutes in 30 minutes.

Liftmoore manufactures all of its cranes, outriggers and accessories in the new facility shown below. The building covers 33,000 Sq. Ft. of shop floor space and the office 3,600 Sq. Ft. The facility is located on four acres providing room for future expansion.
