

GUIDER Wireless Control System

FM control system allows for precise control of the proportionally controlled hydraulic cranes. All come with a charger and a 25 ft. CAN cable that can be plugged in between crane and transmitter for non-FM use if necessary. The CAN cable also charges the batteries while hooked up in the event the transmitter should need charging while in use. With the optional engine receiver, we are able to maintain the unlimited rotation system that is a standard feature on most of our hydraulic powered cranes.

Optional engine control receiver enables remote engine start / stop, engine hi / low, and on / off control for auxiliary equipment

Proportional speed control of all functions by way of trigger

25' CAN cable

12V DC lighter port charger (AC charger also available)

- Intelligent Power Management
- EasySync RF Technology
- Two-Way Communication
- Actively Protected & Monitored I/O
- Real-Time Feedback
- Active Safety Checking
